DESCRIPTION:

FGCI's Webbing Solution is a proprietary formula of mixed thermoplastic resins in solvent.

Webbing Solution affectionately known as "Spiderman Juice" adds a unique quality to Gel Coats causing them to string together or become a "snot-like" consistency.

This consistency, property allows Gel coats mixed with Webbing solution to flow from spray guns in "Spider Web" like patterns which can be adjusted by changing the air pressure of the spray equipment.

This product has been available for many years and different applicators may all use the product in a slightly different manner to get the effect they desire.

General instructions include mixing 40%-60 % Webbing solution into catalyzed gel coat. Transferring it to a spray gun and then turning up the air pressure until the desired web pattern is achieved, after this the material is sprayed onto a wet or still tacky, catalyzed resin or gel coat surface.

When used properly this product will form a decorative affect which can hide a multitude of cosmetic sins and small product defects.

Appearance:	Clear Syrup like
Percent Solids	20 to 25 %
Flammability	Extremely Flammable

CAUTION!

Can cause severe eye irritation. May cause skin irritation, dermatitis. May cause lung irritation. Avoid contact with eyes, skin, and clothing. Avoid breathing vapors and mist. **EXTREMELY FLAMMABLE**

This material is for professional use only, using adequate ventilation and protection from eye and skin exposure. Any information supplied with this material is given in good faith but should be verified by the end user, as is the suitability of the material for their application. The warranty of this material shall be limited to the replacement of defective material.
